— THE PROBLEM

Hundreds of orders. One WhatsApp thread.

01

Order intake

WhatsApp groups, Facebook, website — orders scattered, no central log

02

Document handling

Pro formas created manually in SQL; customisation remarks typed as free text

03

Payment matching

Slips sent to WhatsApp group; coordinators match manually — overnight during peak

04

Multi-drop delivery

50+ addresses on a spreadsheet; failed deliveries chased by phone with no record

If MAIA can optimise our human power in terms of billing and delivery tracking — if these two parts MAIA can do more efficiently than temporarily hiring newbies, that would help a lot already.

— Mr. Lim, JDX Tea

Order to Cash — Reimagined

	01 Order Intake	02 Pro Forma Invoice	03 Payment Confirmation	04 Remarks Propagation	05 Multi-Drop Delivery	06 Delivery Tracking
TODAY	Orders via WhatsApp, Facebook, website & kiosk — no central log; each channel is a separate thread	Pro forma created manually in SQL one by one; discount tier applied from memory; customisation typed as free text	Bank slip sent to WhatsApp payment group; coordinator manually matches each slip to pro forma — standing by overnight at peak	DO created after payment matched; remarks retyped from pro forma — details drop at every handoff; warehouse reads printed DO or screenshot	50+ delivery addresses per corporate order tracked on a per-order spreadsheet; addresses captured verbally or via WhatsApp	KV: driver photos matched manually from WhatsApp group. Outstation: 3PL tracking chased by coordinator. Reschedules by phone — no record
WITH MAIA	SO created in MAIA via web app or WhatsApp chatbot	PDF generated instantly with structured remarks	Attach slip in MAIA → one-click Invoice conversion	Entered once at SO → flows to Invoice, DO, warehouse	One SO → multiple DOs; each drop tracked independently	Live status per drop; Daily Digest + alerts via chatbot

Create Order + Pro Forma Invoice

• PAIN TODAY

- Accounts assistant manually creates pro forma in SQL
- Customisation remarks typed as free text — no structure
- No central order log across channels

• MAIA SOLVES IT

- Create SO — customer, items, qty, customisation remarks (ribbon colour, greeting card, delivery date, price tag on/off)
- Pro Forma Invoice PDF generated instantly
- Sent to customer directly from MAIA

Web App

Sales Workspace → Create SO → Generate PDF → Pro Forma Invoice

WhatsApp

"Create order for [customer], [item], [qty]" → add remarks → send pro forma

Payment Confirmation + Invoice Conversion

• PAIN TODAY

- Customer sends payment slip to WhatsApp group
- Coordinator manually matches slip to pro forma
- Coordinators stay up overnight during peak season

• MAIA SOLVES IT

- Coordinator attaches payment slip to the order in MAIA
- One-click: Pro Forma → Invoice conversion
- All line items, remarks, and customer details carry through automatically

Web App

Finance Workspace → attach payment slip → Convert to Invoice

WhatsApp

"Convert SO-0001 to invoice" → attach slip → receipt created

Customisation Remarks — Entered Once, Used Everywhere

• PAIN TODAY

- Same remarks retyped or copy-pasted at every handoff
- Pro forma → DO → warehouse → ops — details drop along the way
- Warehouse repacks too late due to missing instructions

• MAIA SOLVES IT

- Remarks entered once at the Sales Order
- Automatically flow: SO → Invoice → Delivery Order → Warehouse view
- No retyping. No copy-paste. No WhatsApp forwarding.

Presenter note: Show the remarks field on the SO only. Do NOT click through to Invoice or DO.

Say: "This is built for JDX in Phase 1. When configured, remarks carry through automatically to the DO and warehouse view — we won't demo it live today."

Multi-Drop Delivery — One Order, Many Destinations

• PAIN TODAY

- One corporate order = 50+ delivery addresses on a spreadsheet
- No live view — failed deliveries handled by phone
- No record of reschedules or failed attempts

• MAIA SOLVES IT

- One SO → multiple DOs (Blanket Order); each DO has its own date and status
- All drops linked to source SO — viewable in one place
- Schedule, track, and update each drop independently

Web App

Logistics Workspace → create multiple DOs from one SO
→ each with own date and status

WhatsApp

"Split SO-0001 to 3 DOs: 20/15/15" → MAIA confirms DOs created

Delivery Status Tracking — Live, Per Drop

• PAIN TODAY

- Coordinator scrolls WhatsApp to match driver photos to drops
- Failed deliveries rescheduled by phone — no record kept
- No morning visibility on what's scheduled vs pending

• MAIA SOLVES IT

- Each DO: To Schedule → Scheduled → Completed / Failed
- Mark delivered, failed, or reschedule via web app or WhatsApp
- Daily Digest every morning: Pending / Scheduled / Completed
- Alert when DO not scheduled after X days from invoice

Web App

Logistics Workspace → update DO status → view all drops for one order

WhatsApp

"Mark DO-001 as delivered" → Daily Digest preview

— SCOPE SUMMARY

What's In, What's Out

PHASE 1 — INCLUDED

- Sales Order creation + Pro Forma Invoice PDF
- Customisation remarks — structured + auto-propagation
- Payment matching + Invoice conversion
- Delivery Order creation from Invoice
- Multi-Drop Delivery (Blanket Order)
- Delivery status tracking
- Sales Agent Chatbot (WhatsApp)
- Logistics Agent Chatbot (WhatsApp)
- PDF output: Pro Forma, Invoice, Credit Note, Receipt, DO
- SQL accounting integration

PHASE 2

- Consignment kiosk daily stock reporting
- Inventory management

NOT IN SCOPE

- Giant / AEON B2B portal billing
- Automated bank reconciliation
- Delivery route optimisation

Ready to run peak season without the chaos.
