

[Updated] Lean Giap SOW

The Services Agreement is made effective as of 11th November 2025

BETWEEN	The Vendor	Mindhive Sdn Bhd (“Mindhive”), with its office located at 7, Jln Penyajak U1/45A, Hicom-glenmarie Industrial Park, 40150 Shah Alam, Selangor.
AND	The Client	Lean Giap Enterprise Sdn Bhd (“Lean Giap”), with its office located at 4th Floor, Wisma Giap Chew, 28, Lebuhraya, Georgetown, 10200 George Town, Penang.

1. Introduction

- **About MAIA**

MAIA is a next-generation business platform that unifies sales, fulfillment, communications, logistics, and finance into a single ecosystem. It is designed as a modular, cloud-based solution where each module can function independently yet integrates seamlessly into the wider MAIA environment. This ensures flexibility for smaller businesses while delivering enterprise-level scalability and control. Our vision is to help organizations manage their entire sales and operational lifecycle from a single, intelligent system — increasing efficiency, improving customer engagement, and enabling growth.

- **Purpose of Document**

To establish the baseline specifications, service level commitments, and commercial framework for the deployment and ongoing use of MAIA between the Vendor and the Client.

- **Mutual Commitment**

This document sets out the expectations and obligations of both parties to ensure a successful business engagement.

1.1 Enterprise Baseline Modules

The following sections outline the baseline modules included in **MAIA Enterprise**, with their scope and product specifications:

1. Internal Chatbots

2. User Workspaces

2. Product Specifications (Phase One)

The following section highlights in detail the modules that Lean Giap will be receiving and also the features of the modules. Each module is carefully designed with **scalability, configurability, and high availability** in mind, ensuring it can fit into Lean Giap's business process. The system is engineered with support for handling hundreds of thousands of transactions per day.

2.1 Internal Chatbot (B2B Sales)

2.1.1 Sales Agent Assistant

The sales agent assistant chatbot serves as an assistant to help sales agents to create orders for B2B clients.

- **Platform:**
 - WhatsApp
- **Features:**
 - **Intelligent Document Processing (IDP):** To process documents such as images of handwritten notes, Purchase Orders, images of orders, payment slips, etc.
 - **Pre-Order Creation Checkings:** Sales agent chatbot will perform necessary checkings before creating an order such as customer credit limit checking, shipping zone and weight based routing, and etc.
 - **Sales Order Creation:** Enables sales agents to create both standard and blanket sales orders through WhatsApp or email.
 - **Output Document Generation:** To generate output documents. *List of output documents supported:*
 - *Quotation*
 - *Sales Order*
 - *Invoice*
 - *Delivery Order*
 - *Picking List*
 - *Credit Note*
 - *Receipt*

- *Payment Voucher*
- **Daily Digests:** Sales agent chatbot is able to send a daily digest that consists of unprocessed orders to the sales agents on a daily basis.
- **Sales Process SOP:** Sales processes such as approval (*if applicable*) will be implemented in the chatflow.

2.2 User Workspaces

Desktop Web and/or Mobile Responsive Web interfaces, where users can login and interact with the System

2.2.1 Sales Agent Workspace

- **Features:**
 - **Sales Order Management:** Create, modify, and track sales orders.
 - **Order Lifecycle Overview:** Users are able to manage and have an overview of the statuses of the orders (draft, confirmed, fulfilled, billed).
 - **Output Documents Management:** View and manage the created output documents.
 - **Customer Management:** View and manage the details of each client.

2.2.2 Integration & Data Sync with Epicor

To push and synchronise data with Epicor, the following connectivity is required. **Final method is subject to confirmation with the client's Epicor vendor/IT team.**

- **Integration Method:**
 - Preferred: Epicor REST / Service Connect endpoints.
 - Alternate: Secure file-based import/export (CSV/XML via SFTP) if on-prem or API access is restricted.
- **Core Touchpoints:**
 - Master Data (Read): Customers, Items, Price Lists, Credit Terms/Limit, Inventory availability.
 - Transactions (Write): Sales Orders (from MAIA to Epicor).
 - Status/Docs (Read/Write as applicable): Delivery Order status, Invoice status/number, Receipts (AR).
 - (If required) Additional Modules: Returns/Credit Notes, Certificates reference fields (for later phases).
- **Dependencies:**

- Epicor hosting type (On Prem), domain URL, and vendor contact for API specs/access.
 - Sample exports: Customers, Items, Price/Discount rules to verify field mapping.
-

3. Customization & Extensions (Phase Two Onwards)

MAIA provides a baseline suite of standard features out-of-the-box. However, recognizing that every business has unique workflows, the system supports a broad range of **customization and extension options**. These are carefully scoped, estimated, and mutually agreed upon prior to execution, ensuring alignment with both business requirements and technical feasibility.

3.1 Customisations (Phase Two)

3.1.1 Finance Chatbot

- **Platform: WhatsApp + Microsite**
 - The chatbot assists Finance and Credit Control teams by automating payment reconciliation, approvals, and compliance validation across multiple channels.
- **Core Features:**
 - **Bank Statement Parser & Auto-Matching Engine:** Reconciles incoming payments across multiple banks*.
 - **Real-Time Alerts:** Chat notifications for unmatched, delayed or issues with reconciliation.
 - **Exception Workflow:** Flag short-paid or duplicate entries for finance review.
 - **C3/A57 Certificate Capture:** Allows sales agents to record and store customer SST exemption certificates (C3/A57) during KYC updates for future compliance reference.

Lean Giap will provide the customer tax exemption file to Mindhive, which will be used to identify customers eligible for SST exemption within the system.

- **Approval Matrix Module**
 - **Rule-Based Checking:** Handles Price/Discount breaches, Credit Limit exceedances, and KYC approvals.
 - **Sequential Approval Flow:** Approvals flows customized to fit Lean Giap's business process
 - **In-Chat Actions:** Managers can approve/reject directly within WhatsApp or microsite.
- **Blanket Orders:**

- Allows customers to place large orders that can be released in smaller batches, with automatic stock validation, balance tracking, and SST Exemption Checking (C3/A57)–aware fulfilment routing.
- **C3/A57 Certificate Validation for Tax Compliance**
 - **Certificate Tagging:** Users obtain C3/A57 from MySST portal and submits the document through chat.
 - **PO/SO Linking:** Chatbot links the order to each certificate belongs to and stores reference.
 - **Blocking Rule:** Invoice creation is automatically blocked if a required certificate is missing or invalid.
 - **Reminders & Audit Checks:** Automatic follow-ups and validation logs for compliance audits.

3.1.2 Finance Workspace

Platform: Workspace

The workspace provides Finance and Credit Control teams with dashboards and management tools for reconciliation, approvals, and compliance tracking.

- **Core Features:**
 - **Reconciliation Dashboard:** Visualises matched, partially matched and unmatched transactions.
 - **Approval Tracking:** Monitor who approved what and when, with timestamps and SLA status.

Notes: *These customisations will be scoped in detail post Phase 2 delivery and refined based on Lean Giap’s Finance and Compliance team workflows.*

** Bank reconciliation accuracy is dependent on ‘Matchable Descriptions’—bank statement text that uniquely links a payment to a transaction (e.g., invoice/reference number, payer name, narration). Items without a Matchable Description, or with conflicting descriptors, will not be auto-matched and will be processed via manual review*

3.2 Customisations (Phase 3)

3.2.1 CRM Chatbot

- **Platform: WhatsApp + Microsite**
 - The chatbot assists Sales, Customer Service, and Credit Control teams by streamlining customer onboarding, KYC approvals, and CRM visibility.
- **Core Features:**
 - KYC & Customer Management Enhancements
 - Progressive KYC Intake: Step-by-step chat/microsite flow that allows customer information to be collected across multiple sessions.
 - **Document Upload:** Customers or sales users can upload supporting documents (e.g. business license, form 9, etc.) directly in chat.
 - **Credit Control Approval Queue:** Approve / Reject / Need Info actions handled by Credit Control within chat for both new and existing customers.
 - **Automated Notifications:** System reminders for incomplete or expiring KYC information sent to responsible users.
 - **Status Enquiry:** Sales or Credit teams can query any customer's KYC or credit approval status directly in chat.
 - **Customer information query:** Enables sales agents to share new customer information directly through chat (*E.g: "Customer A is setting up a new factory"*), with the chatbot recognising such messages as customer information updates and prompting the agent to confirm and record them in the CRM.

3.2.2 CRM Workspace

The workspace provides Sales, Credit Control, and Management teams with customer visibility, CRM dashboards, and approval tracking tools.

- **Core Features:**
 - **Customer Workspace:** Unified view of customer records, credit approvals, KYC completeness, and uploaded documents accessible to Sales and Credit teams.
 - **CRM Dashboard & Data Visibility:**
 - **Centralised Dashboard:** To display sales the KYC completion rates, customer segmentation, and approval turnaround times data.
 - Search and filter tools by entity, status, or approval stage.
 - Downloadable reports for audit and compliance.
- **User Role Access:** Granular permission control for Sales, Credit Control, and Management roles.

- **Action Log & Traceability:** Every KYC update or approval action recorded with timestamp and user details for audit purposes.
 - **Updating Questionnaires:** Lean Giap will send any required changes to the KYC Questionnaire, which Mindhive will handle directly for now, as the frequency of updates is currently low. In the future, Mindhive will provide an interface that will allow Lean Giap to make these updates independently.
-

4. Estimated Timelines - Three Phase Delivery

Phase 1: Base MAIA System (per Section 2: Product Specifications)

Deliver and go-live with the baseline MAIA features outlined in **Section 2**. Indicative activities and durations:

Item	Indicative Time Taken
Onboarding & Setup	1-2 weeks
Configuration & Customisation	1-2 weeks
User Training & UAT	1-2 weeks

Phase 2: Customization & Extensions (per Section 3)

After Phase 1 go-live, we will design, build, and release the agreed customisations listed in **Section 3**. Timelines are confirmed via change requests per item; as guidance, delivery typically follows:

Item	Indicative Time Taken
Design & Detailed Scoping	1-2 weeks
Build & Integration	3-6 weeks
User Training & UAT	1-2 weeks
Go-Live & Hypercare	1-2 weeks

*Notes: All durations are indicative and depend on scope complexity and client responsiveness (approvals/clarifications typically within **2–3 working days** as outlined in Client Commitments).*

5. Commercial Structure

- **Pricing Model:** Subscription-based (monthly), with tiered pricing (Enterprise)
- **Customization Fees:** Quoted separately on a time-and-materials or fixed-price basis
- **Payment Terms:** Net 30 days (unless otherwise agreed)
- **Renewal & Escalation:** Annual price review, inflationary adjustments, or additional usage-based charges

5.1 One-off Development Cost

Item	Price
<u>Core</u> • Baseline Enterprise MAIA System • Periodic System and Feature Updates • Storage, Model Training, Ingestion	RM 48,000
<u>Customizations</u> • Conversational Commerce Chatbot ◦ Customized B2C Chatflow ◦ Intent & Preference Capture ◦ Consultative Recommendation ◦ C3/A57 Certificate Validation ◦ Intelligent Image Recognition ◦ Account Memory ◦ Product Upselling	FREE* RM 72,000
Grand Total	RM 48,000

Subject to AWS subsidisation. If that doesn't happen, Mindhive will provide all the **customizations (item 2) above the RM48,000 base for free.*

5.2 Payment Terms

Milestone	Percentage	Price
Milestone 1 - Phase One Initiation	50%	RM 24,000

Milestone 2 - UAT Sign Off	50%	RM 24,000
----------------------------	-----	-----------

6. Caveats & Exclusions

- **Third-Party Dependencies:** Mindhive is not liable for downtime/issues on external platforms (Google Sheet, etc.)
- **Connectivity:** Client responsible for internet and device readiness
- **Client-side Integrations:** Any unsupported third-party integrations outside approved scope
- **Data Accuracy:** Responsibility lies with Client for correctness of provided data

7. Service Level Agreements (SLAs)

7.1 Mindhive Commitments

System Availability: 99.5% uptime (excluding scheduled maintenance).

Support Response Times:

- **Critical (P1):** Within 2 hours
- **High (P2):** Within 8 hours
- **Normal (P3):** Within 2 business days

Maintenance Windows: Pre-communicated, typically scheduled during weekends or off-peak hours.

Data Protection: Regular backups and defined disaster recovery commitments to safeguard client data.

Lifetime Upgrades & Support: Clients will continue to receive ongoing product upgrades, security enhancements, and support for the lifetime of their subscription, ensuring the platform remains current, secure, and aligned with evolving business needs.

7.2 Client Commitments

User Access & Permissions: Client to designate system administrators and enforce internal user policies.

Data Provisioning: Provide accurate, complete, and timely data uploads to enable smooth onboarding and continued operations.

Timely Feedback: Provide approvals, clarifications, and input during customization and implementation phases to avoid project delays.

Compliance: Adhere to licensing terms, security practices, and applicable regulations.

Point of Contact: Designate a primary point of contact (POC) for Mindhive communications. The client commits to responding to vendor queries, requests, or approvals within **2–3 working days**.

Payments: Ensure timely settlement of subscription fees, invoices, and any approved change request costs as per the agreed commercial terms.

8. Appendix

8.1 Delivery Model

Cloud-Hosted Platform: MAIA is delivered securely from the cloud, ensuring continuous availability and ease of access without the need for local installations.

Flexible Tiers:

- **Freemium:** Entry-level access with shared hosting and essential features.
- **Pro:** Dedicated environment per company with advanced features.
- **Enterprise:** Fully isolated environment with dedicated infrastructure, compliance support, and custom options.

Deployment Regions: Data hosting can be tailored to regional compliance or performance requirements (e.g., APAC, EU, US).

8.2 System Interfaces

Web Application:

- Accessible via all modern browsers.
- Provides intuitive dashboards and role-based views for managers, finance teams, operations, and administrators.
- Real-time updates for transactions, approvals, and customer interactions.

Mobile-Responsive Access:

- Optimized for smartphones and tablets.
- Designed for sales teams, delivery agents, and field users to perform tasks such as order management, approvals, and proof-of-delivery on the go.

Specialized Workspaces:

- **Sales Workspace:** Tailored for sales agents to manage quotations, orders, and customer interactions.
- **Operations & Delivery Workspace:** Enables drivers and logistics staff to update statuses and capture proof of delivery or payment.
- **Managerial Dashboards:** Provide leadership teams with visibility into performance, revenue, and outstanding actions.

Integration Interfaces:

- Standardized APIs for extending functionality and connecting with external platforms.
 - Pre-built integrations with major sales channels (Shopee, Lazada, TikTok, Shopify, WooCommerce) and communication tools (WhatsApp, Telegram, WeChat, Messenger, Email).
-

8.3 Core System Capabilities

- **Unified Business Foundation:** A robust digital core that consolidates sales, finance, inventory, logistics, and communications into one environment.
 - **Customizable Workflows:** Business processes can be tailored to reflect each company's policies and approval steps.
 - **Scalable Data Models:** Flexible structures accommodate both standardized records and unique, platform-specific requirements.
 - **Extensibility:** Companies can configure new rules, workflows, and integrations without disrupting existing processes.
-

8.4 Security & Compliance

- **Authentication:** The system currently supports secure, role-based access with standard authentication. Additional options such as two-factor authentication (2FA) and single sign-on (SSO) will be introduced in future releases to further strengthen enterprise security.
 - **Data Isolation:** Company-level isolation; Enterprise clients get fully isolated database instances, ensuring data encryption in transit and at rest.
 - **Encryption:** TLS 1.2/1.3 in transit, AES-256 at rest.
 - **Compliance Roadmap:** SOC2, ISO27001, GDPR readiness, and customer-managed encryption keys (Enterprise).
-

8.5 Availability & Performance

- **High Availability:** Built-in redundancy and automated failover to minimize downtime.
 - **Scalability:** Infrastructure expands automatically to handle seasonal sales peaks and large transaction volumes.
 - **Uptime Commitment:** 99.9% uptime SLA for Pro and Enterprise clients.
 - **Performance Monitoring:** Proactive system monitoring and optimization to maintain speed and reliability.
-

8.6 Customization & Extensibility

- **Workflow Customization:** Clients may request adjustments to approval flows, SOPs, and operational processes. Such requests will be reviewed and delivered through formal change requests or variation orders, subject to feasibility and vendor assessment.
 - **Data Flexibility:** While standard business records are provided out-of-the-box, additional configurable fields or data models can be introduced upon request. These enhancements are subject to evaluation by the vendor's development team and may require separate approval.
 - **Branding Options:** Enterprise clients may request white-labeling of the system with their own branding and domains. Branding changes outside the standard scope will be handled as a variation order.
 - **Integration Points:** New integrations with external platforms (via APIs, event triggers, or modular connectors) can be developed upon request. The vendor will assess the complexity and impact of such integrations, which will be delivered through formal change requests.
-

9. Acknowledgement & Agreement

This document serves as a baseline specification and framework for Maia's implementation and usage. By signing below, both parties agree to the commitments, responsibilities, and exclusions set out herein.

For Mindhive:

Signature

Name: Johnson Goh Han Swee

Position: CEO

Date: 11/11/2025

For Lean Giap:

A handwritten signature in black ink, appearing to be 'Abby Teoh', written over a horizontal line. The signature is stylized with a large initial 'A' and a long, sweeping horizontal stroke.

Name: Abby Teoh

Position: Director

Date: 4/12/2025
